Project Cost Estimate Template · Expert version

A project cost estimate template builds up the cost of a project from labour, materials, equipment and other costs by task or work package, then adds contingency to give a realistic budget.

How to use this template

1. List tasks or work packages from your WBS.
2. For each, enter the resource, unit, quantity and rate.
3. Choose an estimating method for each line.
4. Review the subtotal, contingency and total.
5. Agree the estimate and use it as your cost baseline.

Tips

- Estimate with the people doing the work.
- Record assumptions for each line.
- Use three-point estimates for uncertain items.
- See cost estimation for methods.

Cost estimate · Quantity x rate; contingency and total calculate automatically

WBS / task	Description	Resource	Unit	Quantity	Rate ($)	Cost ($)	Estimate type	Notes
1.1	Project management	Project manager	day	20	650	13,000	Bottom-up	
1.2	Requirements	Business analyst	day	10	550	5,500	Bottom-up	
1.3	Development	Developer	day	60	600	36,000	Analogous	Based on last portal project
1.4	Cloud hosting (year 1)	Hosting	month	12	400	4,800	Vendor quote	
1.5	Testing	QA engineer	day	15	500	7,500	Parametric	25% of dev effort
	Subtotal					66,800		
	Contingency (10%)					6,680		For identified risks
	Total estimate					73,480
