RAID Log Template · Expert version

A RAID log template keeps a project's Risks, Assumptions, Issues and Dependencies in one place with owners, ratings, actions and due dates, ready to review in every status meeting.

How to use this template

1. Add each item with a type and a clear description.
2. Rate impact (and probability for risks).
3. Assign an owner and agree an action with a due date.
4. Review the log in every status meeting and update status.
5. Escalate high-impact items to the sponsor and close items when resolved.

Tips

- Write risks as cause → event → effect.
- Validate assumptions early; unproven ones become risks.
- Convert risks that happen into issues.
- Keep closed items for lessons learned.

Dashboard (sample data)

Field	Value	Count
Type	Risk	1
Type	Assumption	1
Type	Issue	1
Type	Dependency	1
Owner	Ops lead	1
Owner	PM	2
Owner	Tech lead	1
Status	Not started	2
Status	In progress	2
Status	On hold	0
Status	Blocked	0
Status	Done	0

RAID log · Risks, Assumptions, Issues and Dependencies in one log

ID	Type	Description	Impact	Probability	Owner	Action / mitigation	Due	Status
R1	Risk	Billing API may not be ready by 1 Feb	High	Medium	Tech lead	Weekly check-in with billing team; mock API ready	30 Jan 2026	In progress
A1	Assumption	Support team available for UAT in March	Medium		PM	Confirm with support manager	5 Feb 2026	Not started
I1	Issue	Test environment unstable	High		Ops lead	Rebuild environment; daily health check	20 Jan 2026	In progress
D1	Dependency	Single sign-on from IT security project	High		PM	Track in IT security plan; agree date	27 Feb 2026	Not started
