Project Scope Statement Template · Expert version

A project scope template helps you write a clear scope statement: what the project will deliver, what it will not, how deliverables will be accepted, and the constraints and assumptions behind it.

How to use this template

1. Start from the project charter and requirements.
2. Describe deliverables and what is in scope.
3. List exclusions to prevent scope creep.
4. Write measurable acceptance criteria.
5. Record constraints and assumptions, then get sign-off.

Tips

- Be specific; vague scope causes disputes.
- Out of scope is as important as in scope.
- Use the scope to build the WBS.
- Change it only through change control.

Scope statement · Agree it with the sponsor before detailed planning

Section	Guidance	Your content
Project objectives	What the project must achieve (SMART).	
Product / service description	What is being created.	
Deliverables	All outputs to be handed over.	
In scope	Work and features included.	
Out of scope	Explicit exclusions.	
Acceptance criteria	How each deliverable will be accepted.	
Constraints	Fixed limits: budget, dates, regulations, resources.	
Assumptions	What you believe to be true.	
Milestones	Key dates.	
Approval	Name, signature and date.
