# Lessons Learned Template · Advanced version

A lessons learned template captures what went well, what didn't and why, and turns it into recommendations with owners, so future projects repeat successes and avoid the same mistakes.

## Lessons learned · Capture lessons during the project, not only at the end

| # | Phase / area | What happened | Went well or needs improvement? | Root cause | Impact | Recommendation | Owner | Action status |
|---|---|---|---|---|---|---|---|---|
| 1 | Planning | Requirements signed off two weeks early | Went well | Product owner available daily | Medium | Secure product owner time in the charter | PMO | Done |
| 2 | Build | Test environment unavailable for 5 days | Needs improvement | No environment booking process | High | Book environments at planning; add health checks | Ops lead | In progress |
| 3 | Communication | Stakeholders unclear on go-live date | Needs improvement | Date changed without update | Medium | Publish dates in a single dashboard | PM | Not started |
