Product Backlog Template · Expert version

A product backlog template gives your Scrum Team a single ordered list of everything needed to improve the product, with descriptions, value, estimates and status, ready for refinement and Sprint Planning.

How to use this template

1. Add every known item: stories, bugs, spikes and technical debt.
2. Order the list by value, risk and dependencies; the Product Owner decides the order.
3. Refine top items with the team and estimate them; see backlog refinement.
4. Mark items Ready when they meet your readiness checklist.
5. Pull ready items into Sprint Planning.

Tips

- Keep only the top items detailed.
- Remove items that no longer add value.
- Make the Product Goal visible above the backlog.
- Use user stories for clarity.

Dashboard (sample data)

Field	Value	Count
Type	Story	3
Type	Bug	1
Type	Spike	1
Type	Tech debt	1
Type	Epic	0
Status	Not started	5
Status	In progress	1
Status	On hold	0
Status	Blocked	0
Status	Done	0

Product Backlog · Ordered by the Product Owner: top items are refined and ready

Order	ID	Item / user story	Type	Value (1-10)	Estimate (points)	Ready?	Sprint	Status
1	PB-101	As a customer, I can reset my password by email	Story	9	5	Yes	14	In progress
2	PB-102	As a customer, I can download invoices as PDF	Story	8	3	Yes	14	Not started
3	PB-110	Fix timeout on invoice search	Bug	7	2	Yes		Not started
4	PB-115	Spike: evaluate search library	Spike	6	3	Yes		Not started
5	PB-120	As an admin, I can export user lists	Story	5	8	No		Not started
6	PB-130	Upgrade logging framework	Tech debt	4	5	No		Not started
