Work Package Template · Expert version

A work package template describes the lowest level of the work breakdown structure in enough detail to assign, estimate, schedule and accept it.

How to use this template

1. Copy the WBS code and name from your WBS.
2. Describe scope and deliverables.
3. List tasks, then estimate effort and cost.
4. Add dates, dependencies, risks and acceptance criteria.
5. Agree it with the owner and approver before work starts.

Tips

- Keep work packages to a few weeks of effort.
- One owner per package.
- Acceptance criteria make progress objective.
- Roll up estimates to the cost estimate.

Work package · One sheet per work package

Field	Details
WBS code	1.4.2
Work package name	Customer login and password reset
Owner	Tech lead
Description / scope	Build login, logout and password reset using single sign-on.
Deliverables	Working feature in test environment; unit tests; release notes.
Tasks	Design screens; build API; integrate SSO; write tests.
Effort estimate (days)	12
Cost estimate ($)	9,600
Start / finish	2 Mar 2026 / 17 Mar 2026
Dependencies	SSO service (IT security project)
Acceptance criteria	All login test cases pass; security review approved.
Risks	SSO delay
Approved by / date
